

Canning Records

Name of Sugarhouse:_____

Barrel Inspection Process: Prior to filling, a flashlight is used to visually inspect the interior of all barrels for rust, flaking liner, and/or miscellaneous debris. Any debris found is removed and barrels with rust or flaking liner are not used to package syrup. In addition to the visual inspection, all barrels are evaluated for unsuitable odors. Completed inspection of barrels is indicated with a check mark in the “inspect?” column of these records.
